

## DRY WIPES FOR CLEANING, DRYING, POLISHING

Hygienic dry wipes with a multitude of uses throughout industry and the hospital services.

# Convenient, low-lint, non-woven dry wipe with exceptional wet strength

Drytex are wipes with exceptional wet strength and high absorbency power. The low lint fabric is far stronger than paper wipes and other lightweight fabrics used for similar purposes.

Drytex is used for mopping up spillages, drying hands, skin and hard surfaces and general cleaning duties. Manufactured in non-woven fabric, Drytex wipes are more hygienic than reusable cloths and towels, therefore helping to prevent cross infection.

Drytex is used extensively in the NHS, nursing and residential homes.

It is equally suitable for food industry and food preparation areas, canteens and restaurants and in numerous other commercial areas where there is a need to dry surfaces hygienically.

Health clubs and gymnasias also have a need for Drytex for cleaning down equipment after use. In industry, wherever there is a need for absorbency and strength combined with the convenience, hygiene and safety of paper, look no further than Drytex.

Hazard Identification...	No hazardous materials.
Fire Fighting Measures...	Non-combustible.
Handling Storage...	Kept out of direct sunlight, Drytex has an unlimited shelf life.
Biodegradability...	Degrades over length of time.
Disposal...	Never flush to sewer or water courses. Drytex is non-hazardous waste but when contaminated with other harmful substances it should be treated accordingly.
